

PROCESS GUARD

protects the vital
Operational Technology
(OT) networks which
are vulnerable to
cyber-attacks through
connected IT networks

**TAKE CONTROL OF YOUR
OPERATIONAL TECHNOLOGY**

cyberprism.net

The Operational Technology (OT) systems which manage the operating and safety functions of industrial or process application networks are vulnerable to cyber-attacks through connected IT networks.

ProcessGuard is a small, lightweight, low power platform which protects OT networks and legacy equipment

- ▶ Prevents malware infection from IT propagating into OT systems, allowing mission-critical hardware and processes to continue operating safely
- ▶ Protects legacy equipment in an OT network where software patching is no longer possible, allowing older systems to continue operating safely

Functions

- ▶ Customised firewall functionality for the OT domain
- ▶ Segregation of networks and sub-networks
- ▶ Legacy device protection
- ▶ Application Network management
- ▶ Traffic shaping
- ▶ Intrusion detection

Training

- ▶ Humans are the weakest link in the defence against cyber-attack
- ▶ CyberPrism delivers customised online and face-to-face training for staff

Features

- ▶ Bespoke dashboards
- ▶ Works with any networked equipment
- ▶ Integrates with and understands OT
- ▶ Integrates with monitoring tools
- ▶ Forensic logging allows prosecution of attackers
- ▶ Platform for additional security functions
- ▶ Security as a Service subscription - comes with our range of services
